

# FULL SPEC LIVE RESIN HYBRID

LIVE RESIN SAUCE + THC CARTRIDGE

AVD

PAX

**Extraction Type:** High Terpene Full Spectrum BHO

**Extracted From:** Fresh Frozen Full Spec Flower

**Flavor:** Cannabis Derived Terpenes

**THC Potency**..... ★ ★ ★ ★ ☆

**Terpene Content**..... ★ ★ ★ ★ ★

**Entourage Effect**..... ★ ★ ★ ★ ★

### Live Resin Hybrid = Sauce & THC

Just like Diamonds and Sauce dabs merge THC crystals and terpene rich full spectrum, Live Resin Hybrid merges these two live resin outputs into one cartridge using a proprietary process invented and perfected by some of the earliest live resin pioneers.

### Extracted from Fresh Frozen Flower to Lock In Fresh Flavor

Immediately after harvest, our Full Spec flower is fresh frozen and extracted at temperatures as low as -100° F. This locks in the fresh aromas and flavors of each flowering plant, and preserves the entire full spectrum of cannabis compounds.

### Full Spectrum High Terpene Extraction

By maximizing the preserved spectrum of cannabinoids & terpenes in flower instead of focusing on THC, Live Resin Hybrid delivers a sustained entourage effect that makes for a compelling alternative to the quickburst effect of distillate.

### Live Resin Optimized Hardware

Available in both a custom ceramic core AVD cartridge and a temperature controlled PAX Pod, Live Resin Hybrid utilizes high quality hardware that is optimized for the delicate flavors of live resin.

What goes into a good experience? For Full Spec Live Resin Hybrid, everything.

It starts with selecting the cannabis genetics. We look for genetic profiles that not only cultivate well and extract well, but also demonstrate unique characteristics. It continues through the cultivation season, as each and every cannabis plant is cared for and nurtured until harvest, at which time they are immediately frozen at temperatures as low as -80° F to retain their highly prized characteristics.

This fresh frozen cannabis must then be extracted with great care at ultra low temperatures (-70° F to -100° F) in an effort to preserve all the signature cannabinoids, terpenes, and compounds of each strain. This extract then goes through proprietary post processing phase that merges the potency of THC with the flavor of "Sauce" in a convenient vape cartridge and pod format.

The process of making Full Spec is painstaking and detailed, but the end result is simple: a flavor, smell, and effect experience that will make a live resin convert out of anyone.
