Full Spectrum Extraction

The idea of full spectrum extraction is simple - preserve as much of the original complexion of the cannabis plant as possible. This includes cannabinoids, terpenes, flavonoid, and everything in between. This makes for a flower-like character, and a sustained entourage effect.

It Never Touches Hydrocarbons

Supercritical CO₂ takes the place of Butane, Propane, and Ethanol as the extraction agent, and no "winterization" post-processing occurs, meaning that Brights are 100% hydrocarbon-free from start to finish.

Pure, Potent, and Bright

One glance at the Brights is all it takes to understand the origin of their name. The invitingly bright oil color features a honey-like consistency that is pure and potent every time.

Choose your Mood with ease with dab strain stickers

Never deal with a mystery dab dram again! Simply peel off the strain sticker from the bottom right on the front of the cartridge, and stick it your dab dram so you can always choose your mood and strain with confidence.

We've always tried to do things a little differently, and our Brights concentrate line is a great example of that mindset. In a marketplace where BHO dabs are the most common option, Brights offer a CO₂ alternative that never touches a hydrocarbon like butane, propane, or ethanol in its extraction or in its post-processing.

It does this all while maximizing cannabis flavor, strain specific effects, and mouth-watering appearance. The secret? The source material - 100% Leafwerx sungrown cannabis, which prioritizes terpene production, consistency, and interesting strain-characteristics above all.

With the extraction, we just aim to let the nature of the strain to shine through in a full spectrum CO₂ concentrate that consistently delivers purity and potency.
