The Flavor of Flower
By applying high terpene extraction methods to cured and dried flower, Cured Resin delivers a remarkable flower experience in a cartridge and pod format.

Full Spectrum High Terpene Extraction
By maximizing the preserved spectrum of cannabinoids & terpenes in flower instead of focusing on THC, Cured Resin delivers a sustained entourage effect that makes for a compelling alternative to the quickburst effect of distillate.

Low Temperature Extraction
By keeping the temperature as low as -100° F during extraction, precious volatile cannabis compounds are preserved. This means that strain-specific cannabis character is also preserved.

Choose your Mood with ease with cartridge strain stickers
Never deal with a mystery cartridge again! Simply peel off the strain sticker from the bottom right on the front of the cartridge, and stick it your cartridge so you can always choose your mood and strain with confidence.

Our newest addition to our cartridge line began with a simple question. What if we made live resin, but with cured flower instead of fresh frozen flower?

So we set out to find out, feeding our full spectrum high terpene extraction Bizzy Bee machine with some expertly cured and dried Leafwerx flower, and extracting it at ultra-low temperatures to retain as many cannabis plant compounds as possible.

The result was exciting - it had the rich terpene flavor and entourage effect of Live Resin, but with a distinctly more "flower" personality. Vaping the Cured Resin almost had the feeling of smoking a freshly rolled joint, which was a characteristic that quickly gained a following from some of the flower aficionados on staff.

Now available in a wide range of strains and at scale, Leafwerx Cured Resin presents the flavor and personality of flower to customers looking for a new cartridge.
